Plantronics and Microsoft working together on Cloud Voice adoption

Plantronics joined Microsoft in easing some of the pain points along this journey with the announcement of the addition of Plantronics to **Microsoft's MyAdvisor** site (formerly known as Skype Operations Framework or SOF).

Plantronics Joint Development with Nectar for Ear-to-Ear (e2e) Diagnostics

Nectar Services Corp. announced a joint development and strategic alliance agreement with Plantronics to build the industry's first ear-to-ear (e2e) diagnostics solution. The goal of this partnership is to provide enterprises and their service providers with the ability to quickly troubleshoot call quality issues that may originate anywhere – from within the network all the way out to a user's wireless headset. With this new capability, service providers and enterprises can resolve issues faster, ensure superior call quality across the network and improve customer service.
